

ScanObjex

Identify Objects in Videos and Images and initiate actions and alerts

- Automatic visual identification of objects in video streams and any type of image.
- Simple integration with workflows allows automated initiation of orders, alerts and other actions.
- Using pre-built or custom-trained catalogs of objects and situations, individually per customer.
- Runs as self-managed service on-premises or in the cloud.

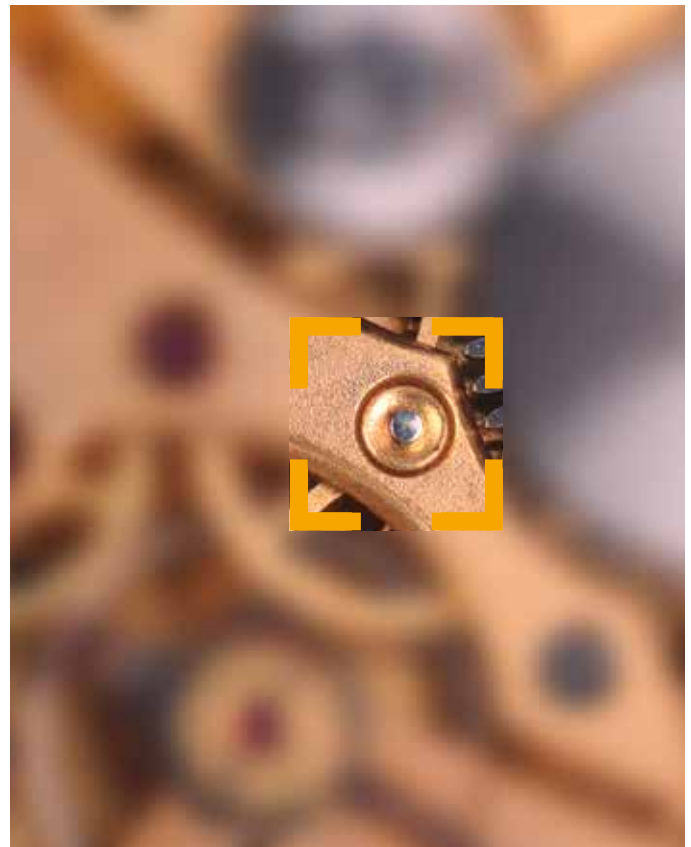

Solution Scenarios

- **Part identification** - via your website-visitors' webcams or your service reps' cameras, allows automatic lookup of catalog-items and can start order workflows.

- **Security scanner monitoring** - identifies suspicious items and situations and automatically generates alerts and logs.

- **Automatic tagging and timecoding** - catalogs the semantic content of your videos and photos and adds metadata to your files or into your databases.

- **Forensic Analysis** - analyzes distances, sizes, ratios and movements, from footprints to satellite-imagery.

Technology and Company

- Balzano is a **Gold certified partner of Microsoft with 20+ years of experience** in designing, implementing and operating commercial solutions that leverage artificial intelligence and image analysis.
- We use **cognitive technology and artificial intelligence** to create image analytics solutions, performing deep learning and other machine learning techniques on customer data.
- Our **rapidly implemented prototypes** allow quick discovery of new solution scenarios, followed by a proven agile, Scrum-driven methodology for the implementation of maintenance-free turnkey solutions.
- Balzano's solutions run self-managed on **Microsoft Azure** in the cloud or locally on physical systems.
